PROFESSIONAL SUMMARY

Electronics and Communication Engineering graduate with hands-on experience in embedded systems, firmware development, and PCB design. Proficient in C, Embedded C, ESP32, Arduino Nano, and KiCad. Passionate about microcontroller programming, embedded software development, and hardware-software integration, with a strong interest in building reliable embedded systems.

TECHNICAL SKILLS

Programming: C, Embedded C, Python (Basic)
Embedded Platforms: ESP32, Arduino Nano
Communication Protocols: UART, SPI, I²C
Operating Systems: Linux, Windows
PCB Design: KiCad
Version Control: Git, GitHub
Development Tools: Arduino IDE, VSCodium, FreeCAD

PROJECTS

Multimodal Signal Processing for Disease Diagnosis | *ESP32, Embedded C, Python, Flask, WebSocket* Jan 2025 – Apr 2025

- Developed an IoT-based multimodal heart disease prediction system by integrating ECG signal analysis with clinical blood report parameters.
- Designed and implemented Embedded C firmware for the ESP32 to acquire ECG signals and transmit real-time data to the backend server using Wi-Fi and WebSocket communication.
- Implemented ECG preprocessing and feature extraction to generate diagnostic parameters for heart disease prediction.
- Integrated the embedded system with a Flask-based web application for real-time ECG visualization and prediction result display.

EDUCATION

Government Engineering College Palakkad

Bachelor of Technology in Electronics and Communication Engineering

Palakkad, Kerala

2022 – 2026

- APJ Abdul Kalam Technological University (KTU)
- CGPA: 6.62

VHM Higher Secondary School, Morayur

Higher Secondary Education (Class XII)

Malappuram, Kerala

2019 – 2021

- Percentage: 97%

CERTIFICATIONS

Embedded Systems Training – Vector India (In Progress)

KiCad PCB Design Course – Udemy
